• Mis/disinformation
METHODOLOGY

1k  N=7,179 interviews; nationally representative sample in each country

QC  Quality control checked by in-country research teams and centrally in London, UK

¼  Quarterly fieldwork planned for 2022

F2F  Face-to-face methodology using random household probability sampling

WAVE 2 PRIMARY SAMPLING POINTS:

COUNTRIES SURVEYED:

Reporting note:

Due to the changing country selection throughout this research, on certain slides in the following report there will be a reference to ‘Core Countries’ these are countries that were included in the baseline wave in June 20 through Wave 1 and Wave 2 in Jan-22 and Aug-22. These are: South Africa, Kenya, Uganda, Nigeria, DR Congo and Senegal.
COVID-19 VACCINES DEPLOYED VS ADMINISTERED (AUGUST 2022)
DEMOGRAPHICS
64% Have children in the household under 18

12% Healthcare workers

**Employment Status:**
- Working: 48%
- Unemployed: 21%
- Student: 13%
- Stay-at-home parent: 10%
- Retired: 2%

**Religion:**
- Christian: 29%
- Muslim: 27%
- Catholic: 16%
- Protestant: 5%
- Anglican: 4%
- Pentecostal: 3%
- Roman Catholic: 2%

All interviews: n= 7,179
THE VACCINATED
THE VACCINATED

Data collected in August-22 across the 7 countries in Africa shows that 22% of the total populations have now had one dose of the vaccine, with a further 20% having a second dose.

Looking specifically at the Core Countries (those that are consistent across baseline to wave 2 – see report note in introduction); there has been a significant increase in the number of participants who report having received two doses of the COVID-19 vaccine. The unvaccinated population has dropped from 59% to 50%.

Uganda leads the way with the highest proportion of the population vaccinated – 86%. Followed by South Africa at 70% and Kenya at 58%. DRC and Cameroon are at the bottom of the chart however data from Jan-22 to Aug-22 in DRC shows significant differences in the number of those with at least one dose.

COVID-19 VACCINES ADMINISTERED:

- One dose: 55%
- Two doses: 22%
- Additional/booster dose: 3%
- Unvaccinated: 20%

COVID-19 VACCINES ADMINISTERED BY CORE COUNTRIES:

- One dose: Jan-22 22%, Aug-22 19%
- Two doses: Jan-22 23%, Aug-22 23%
- Additional/booster dose: Jan-22 3%, Aug-22 3%
- Unvaccinated: Jan-22 59%, Aug-22 50%

All interviews: n= 7,179
THE VACCINATED

Whilst there does not appear to be any difference by age for those who have been vaccinated and those who have not – there are clear differences in age.

Men and women aged over 35 are significantly more likely to be vaccinated – especially for having more than one dose.

Almost two thirds (63%) of those over 55 have had at least one dose compared to 34% of those aged 18–24.

There is also a clear geographic divide with just over half (52%) of those living in rural areas being vaccinated compared to 40% of those in urban settings. That said it is important to note that younger populations are higher in urban areas in this dataset.

NET COVID-19 VACCINE ACCEPTANCE:

All interviews: n= 7,179
The vaccinated

Net COVID-19 vaccine acceptance: region

- **Uganda**: 86% vaccinated, 14% unvaccinated
- **South Africa**: 70% vaccinated, 30% unvaccinated
- **Kenya**: 58% vaccinated, 42% unvaccinated
- **Senegal**: 34% vaccinated, 66% unvaccinated
- **Nigeria**: 27% vaccinated, 73% unvaccinated
- **DRC**: 20% vaccinated, 80% unvaccinated
- **Cameroon**: 18% vaccinated, 82% unvaccinated

All interviews: n = 7,179
The J&J/Janssen brand of COVID-19 vaccine is the most popular vaccine for participants first dose (consistent with Jan-22).

AstraZeneca edges Pfizer as the most popular second dose.

Around 1 in 5 do not remember which brand they took and a roughly 1 in 10 were not told.

There does not appear to be any significant demographic differences between brand of vaccine.
THE VACCINATED

TOP THREE REASONS FOR GETTING VACCINATED:

90% To protect myself

Highest amongst:
- Stay-at-home parents (95%)
- Non healthcare workers (90%)
- Those who are concerned about COVID-19 for themselves and for their family/friends (91%)

69% To protect family

Highest amongst:
- Those who are concerned about COVID-19 for themselves and for their family/friends (72%)

31% To gain access to spaces that require a COVID-19 vaccine

Highest amongst:
- University educated (38%)
- Students (35%)
- Workers (35%)

Those vaccinated: n=3,234
The vaccinated

**Attitudes Towards Being Vaccinated:**

- **84%** Relieved about being vaccinated against COVID-19
- **63%** Doubts/reservations at the time of getting vaccinated
- **22%** Regret having been vaccinated

Over 8 in 10 of the total vaccinated population report being relieved about their decision to be vaccinated. This is generally consistent across demographics. It is when looking at doubts at the time of vaccination that there are clear differences: 7 in 10 of 18–24 year old's felt this compared to 5 in 10 aged 55+.

Those vaccinated: n=3,234
THE UNVACCINATED
Amongst the Core Countries there has been a significant drop in the number of unvaccinated respondents who would accept a COVID-19 vaccine to protect themselves.

The proportion of participants who said they would definitely not accept a vaccine in Jan-22 sat at 26% - in Aug-22 this increased to 36%. This shows that those yet to be vaccinated are strongly in their views against being vaccinated.

The fall in acceptance does not appear to be driven by any one demographic.

When those who are unvaccinated but are keen to be vaccinated are asked how soon they would accept one (if available) only 31% would do so ‘as soon as it was available to them’. 20% would wait at least 6 months and 10% up to a year.
WOULD ACCEPT A COVID-19 VACCINE TO PROTECT THEMSELVES:

</tr>
</tbody>
</table>

Those unvaccinated: n=3,933
The proportion of those who do not feel they are at risk of catching the virus has increased from 9% to 15% amongst the Core Countries.

**TOP THREE REASONS FOR REFUSAL BY CORE COUNTRIES:**

- Do not feel at risk of catching the virus: 15% (9% in Jan-22, 15% in Aug-22)
- Worried about getting seriously ill/dying from the vaccine: 16% (14% in Jan-22, 16% in Aug-22)
- Do not know enough about the vaccine to make a decision: 10% (10% in Jan-22, 10% in Aug-22)
- Do not believe the virus exists: 12% (9% in Jan-22, 12% in Aug-22)

Those unvaccinated: W1 n=3,085; W2 n=3,124
### The Unvaccinated

#### Top Three Reasons Motivators:

<table>
<thead>
<tr>
<th>Reason</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the government made a vaccine mandatory</td>
<td>22%</td>
</tr>
<tr>
<td>If the vaccine was proven safe</td>
<td>19%</td>
</tr>
<tr>
<td>If my employer required me to get one</td>
<td>14%</td>
</tr>
</tbody>
</table>

The proportion of respondents in the Core Countries who state that nothing would make them more likely to get a COVID-19 vaccine has increased 8% since Jan-22. This is in line with the 10% increase with those who would definitely not accept a COVID-19 vaccine.

![Graph showing changes in reasons for not getting vaccinated](image)

Those unvaccinated: n= 120
VACCINATING CHILDREN
VACCINATING CHILDREN

Looking at Core Countries only, we can see that there has been an 7% increase in COVID-19 acceptance for those responsible for the vaccination for children.

This correlates well with the VCI Index measure for vaccine important for children. Whilst there was a significant decrease across the board since Jun-20, the only group who appear to be returning to pre-vaccine roll out levels is the demographic who live in households with children under 18. This increase is irrespective of gender.

**NET COVID-19 VACCINE ACCEPTANCE FOR CHILD(REN) IN PARTICIPANTS CARE:**

</tbody>
</table>

Those responsible for the vaccination of children: W0=3756, W1=4405, W2=4071
VCI INDEX AND OTHER VACCINATIONS
Similar to the VCI Index measure on the importance of vaccination, from Jun-20 to Jan-22 there was a sharp decrease in importance for both COVID-19 vaccines and vaccines in general. Since Jan-22 whilst there hasn’t been any significant change for this measure there is a slight upwards trend. That said there is still a way to go to get back to pre-vaccine roll out levels.

There are some demographic variations within the index, older participants tend to score higher for measures of safety and effectiveness and women tend to score higher for measures of safety (see next slide).
VCI INDEX: BY AGE AND GENDER

</table>

All interviews: n = 7,179
OTHER VACCINATIONS

Around 3 in 4 of the total Aug-22 dataset report never having rejected a vaccine – leaving 23% of have.

Vaccine rejection is higher amongst younger age groups and students by around 5%. They are also more likely to score hesitant on the VCI Index.

The number one vaccine rejected across all countries is COVID-19, followed by yellow fever.

REJECTION OF VACCINES:

- Yes
- No
- I have never received an invite for any vaccinations

COVID-19: 77%
Yellow fever: 11%
Hepatitis B: 10%
MMR: 7%
Influenza (flu): 7%
Meningitis: 7%
Polio: 7%
HPV: 5%

All interviews: n = 7,179
Willingness to get vaccinated as a result of the pandemic:

- A lot more likely
- Somewhat more likely
- Somewhat less likely
- A lot less likely
- There has been no change in my views to vaccines
- Don't know

Just over half of the total sample (53%) report that they are more likely to get vaccinated as a result of the pandemic.

This sentiment is strongest for malaria (56%) followed by influenza (50%).

In the survey we specifically asked about whether or not participants would accept a COVID-19 vaccine:
- 63% would definitely accept
- 13% unsure leaning towards yes
- 5% unsure leaning towards no
- 17% definitely would reject

All interviews: n = 7,179
THREAT FROM COVID
Around half of the sample report being very concerned about getting COVID-19 for their friends or family.

Concern is mainly driven by those in older generations and in households with children under 18.

Uganda ranks highest for countries concerned, followed by Kenya and South Africa. There is a clear trend with the level of COVID-19 take up and level of concern.

**Concern about getting COVID-19 for...**

- **Very concerned**
  - Friends/family: 49%
  - Yourself: 46%
- **Moderately concerned**
  - Friends/family: 19%
  - Yourself: 20%
- **A little concerned**
  - Friends/family: 16%
  - Yourself: 17%
- **Not at all concerned**
  - Friends/family: 15%
  - Yourself: 15%

**Countries ranked by concern:**
- Uganda: 13% not concerned, 86% concerned
- Kenya: 32% not concerned, 67% concerned
- South Africa: 36% not concerned, 63% concerned
- Senegal: 41% not concerned, 59% concerned
- Nigeria: 43% not concerned, 57% concerned
- DRC: 44% not concerned, 55% concerned
- Cameroon: 58% not concerned, 41% concerned

NET: Not concerned | NET: Concerned
---|---
Uganda | 13% | 86%
Kenya | 32% | 67%
South Africa | 36% | 63%
Senegal | 41% | 59%
Nigeria | 43% | 57%
DRC | 44% | 55%
Cameroon | 58% | 41%

All interviews: n= 7,179
For the Core Countries the number of people agreeing that the threat from COVID-19 is exaggerated has dropped from 37% to 32%. This drop has been consistent across the age and gender demographics (except for the oldest generation of 55+).

Perceived threat from COVID-19 is another measure explored in this data set. Interestingly in this round of data collection, COVID-19 is the only threat that has remained consistent with Jan-22.

### NET AGREE THAT THREAT FROM COVID-19 IS EXAGGERATED BY CORE COUNTRIES:

<table>
<thead>
<tr>
<th>Age Group</th>

  - Jan-22: 72%
  - Aug-22: 71%

- **Lack of access to clean water**
  - Jan-22: 66%
  - Aug-22: 74%

- **HIV/AIDS**
  - Jan-22: 60%
  - Aug-22: 67%

- **Tuberculosis**
  - Jan-22: 59%
  - Aug-22: 64%

- **Polio**
  - Jan-22: 50%
  - Aug-22: 56%

All Core Country interviews: n=12,570
Compliance with protective and preventative measures amongst the Core Countries in January-22 and August-22 is fairly consistent. Only in washing hands and wearing a face mask we are seeing drops in compliance. That said, almost 8 in 10 are still citing that they are washing their hands more regularly.

As with previous rounds of research, there is no demographic difference between compliance and non-compliance.

**COMPLIANCE WITH PROTECTIVE AND PREVENTATIVE MEASURES BY CORE COUNTRIES:**

- Washing my hands: Jan-22 82%, Aug-22 77%
- Covering my nose or mouth when sneezing/coughing: Jan-22 70%, Aug-22 68%
- Keeping physical distance from others: Jan-22 50%, Aug-22 46%
- Wearing a face mask covering your mouth and nose: Jan-22 47%, Aug-22 56%
- Gathering socially in large groups: Jan-22 51%, Aug-22 52%
- Having guests in your house: Jan-22 50%, Aug-22 52%

All Core Country interviews: n=12,570
When asked whether respondents trust the following groups to ‘do the right thing’ – the data shows clearly that health related groups come out on top.

Politicians rate the worst in the question, with 2 in 3 respondents agreeing that they are doing the right thing – this is true across demographics.

National military and multi-national companies are some of the least perceived as doing the right thing.

<table>

All interviews: n = 7,179
7 in 10 respondents have the final say about whether or not they will take a COVID-19 vaccine.

Women under 35 are the most likely to have someone else weigh in on the final decision – 41% compared to 31% of men under 35.

Stay-at-home parents and those with primary education are some of the most likely to have another person have the final say about their uptake.

% OF THOSE WHO HAVE ANOTHER PERSON HAVE THE FINAL SAY ABOUT RECEIVING A COVID-19 VACCINE:

- Men over 35: 12%
- Women over 35: 28%
- Men under 35: 31%
- Women under 35: 41%

FINAL SAY ABOUT COVID-19 VACCINE UPTAKE:

- Myself: 69%
- My spouse / partner: 10%
- My parents: 9%

All interviews: n = 7,179
World Health Organization (WHO), religious leaders and Pharmaceutical companies are the most popular sources for information on COVID-19 vaccines; when asked about who to turn to when seeking information on their general health, respondents cited most frequently family doctor or healthcare provider (51%), family members (42%) and friends (29%).

Trust in healthcare workers administering COVID-19 vaccines sits at 76% and does not fluctuate by age or gender.

THREE MOST TRUSTED SOURCES FOR REASSURANCE ABOUT COVID-19 VACCINES:

- **78%** World Health Organization (WHO) / Family and friends
- **74%** Religious leaders
- **71%** Pharmaceutical companies (e.g. Janssen, Pfizer)

MISINFORMATION
MIS/DISINFORMATION

The level of self-reported mis/disinformation remains consistent with the Core Countries between the two rounds of data collection where this question was asked.

The noticeable difference between the two waves is the decrease in family/friends being a source of mis/disinformation and an increase in the internet being a source.

Unsurprisingly social media and internet is more common amongst the urban more education younger populations.

Radio is fairly popular across all demographics – something we find is consistent with other research.

SELF-REPORTED EXPOSURE TO MIS/DISINFORMATION BY CORE COUNTRIES:

SOURCE OF MIS/DISINFORMATION BY CORE COUNTRIES:

All Core Country interviews: n=12,570
Around 3 in 10 respondents from the total sample believe that their respective government supports COVID-19 vaccines to further their own interests and that the pandemic is a planned event by foreign actors. Generally – this is consistent across the 2 rounds of research asking these statements. Men and those in younger age categories are much more likely to have not only heard these rumours or stories but also believe that they are true (compared to women and those aged over 55).

### MIS/DISINFORMATION STORIES SEEN AND BELIEVED TO BE TRUE:

- **Our government supports a new COVID-19 vaccine to further its own interests (e.g. for financial gain)**
  - Yes, true: 31%
  - Yes, false: 14%
  - Not heard: 36%
  - Yes, but Don’t know enough: 16%

- **COVID-19 is a planned event by foreign actors/governments**
  - Yes, true: 28%
  - Yes, false: 17%
  - Not heard: 33%
  - Yes, but Don’t know enough: 18%

- **People in Africa are being used as guinea pigs in vaccine trials**
  - Yes, true: 25%
  - Yes, false: 16%
  - Not heard: 40%
  - Yes, but Don’t know enough: 15%

- **The vaccines offered in Africa are inferior to others elsewhere in the world (for example Europe)**
  - Yes, true: 24%
  - Yes, false: 14%
  - Not heard: 43%
  - Yes, but Don’t know enough: 15%

- **Drinking plenty of water helps prevent you from catching COVID-19**
  - Yes, true: 22%
  - Yes, false: 19%
  - Not heard: 42%
  - Yes, but Don’t know enough: 13%
